

BHRC Schara Road Woodland, 2023 Summary

The **278** total surveys conducted at **BHRC Schara Road Woodland** this year ranks **16th** out of the **79** sites that participated in 2023.

Top Participants of 2023

User	Surveys	Arthropods	Caterpillars	% Caterpillars
S Gomez-Maier	34	54	17	29.41
A Shchur	244	161	10	4.10

Caterpillar Phenology

As a major source of food for nestlings of migratory birds, we are especially interested in the timing of caterpillar availability. At **BHRC Schara Road Woodland** in **2023**, caterpillar occurrence peaked at **29.4%** of surveys on **24 May**. Do you see other peaks as well? How does the pattern compare to the previous year?

Other Arthropod Phenology

While caterpillars tend to have pronounced seasonal peaks, other groups are more variable. What patterns do you see below for **2023**? You can explore the phenology of other groups on the **Caterpillars Count!** website.

Arthropod Trends

Annual monitoring is critical for assessing the health of ecosystems and evaluating the impacts of environmental change that may be happening in your area. There have been worrying reports of insect declines around the world but there is much we don't know, so your efforts help to fill in pieces of the puzzle. Keep it up!

Above you can see how the proportion of surveys with caterpillars has varied over time at your site, with the trend for one of our flagship sites, **NC Botanical Garden**, for comparison. If you've surveyed for at least 3 years, then you will also see the average dashed trend line displayed.

Below are trends for some other common arthropod groups. Do the different groups go up and down in sync, or seem to vary independently?

You can explore trends for more arthropod groups, and compare trends at different sites, on your site's Trends Page. See also our November 2021 newsletter for more on how to interpret these trends.

Site Arthropod Composition

Some arthropods are more commonly encountered than others. The graph below portrays the occurrence (proportion of surveys where a given group was found) for each arthropod group found at your site. See how what was found varies by year (if the site has been participating for multiple years), and how it compares to what has been found across all sites in the **Caterpillars Count!** network (*right bar*).

- What are the most common arthropod groups found at your site?
- Has that varied by year?
- Is anything noticeably different about **BHRC Schara Road Woodland** compared to all other participating sites?
- If arthropod photos were submitted as part of your site's surveys, check the last section of this report for a summary of any finer taxonomic id's that have been made.

Arthropod Composition by Plant Species

For some arthropods like spiders, trees and leaves are merely habitat—a place where they live, hide, and hunt. For others like caterpillars, the leaves are not just habitat, but also food.

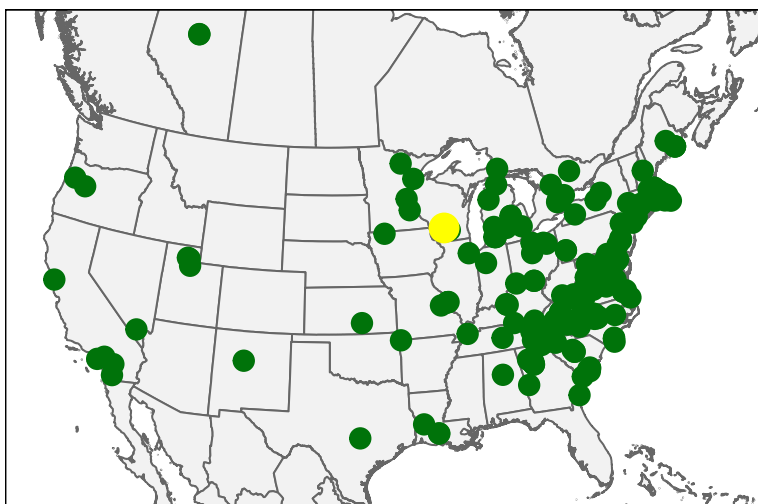

- Which plant species supports the most arthropods per survey?
- Which plant species supports the most **caterpillars**?
- Are any plant species dominated by just one or two types of arthropods?
- Or do they support a diversity of arthropod types?

This bottom panel shows, of the arthropods found on a given plant species, what proportion were from each taxonomic group. At most, only the top 25 plant species are shown.

Broader Patterns

Thanks to participants like yourself, **Caterpillars Count!** observers have now submitted a total of **265,734** arthropod observations—including **18,521 caterpillars**—from **219** different sites.

Across all surveys ever done at **BHRC Schara Road Woodland**, caterpillars have been found **14.6%** of the time, which ranks **30th** across sites. The top 10 sites (with ≥ 20 surveys) are shown below.

Caterpillar occurrence and phenology vary as a function of climate, land cover, tree species, and other local factors, and **your data** are helping us understand this variation and what it might mean for birds. Thank you for participating in **Caterpillars Count!**

Expert Identifications

141 photo observations from ***Caterpillars Count!*** surveys have been submitted from your site. You can check them all out at the site's iNaturalist page. Based on these photo observations, experts on **iNaturalist** have identified the following taxa, including at least **10** unique species. Taxa seen for the first time this year are marked with a *.

Caterpillars

Erebidae

Lymantria dispar

Geometridae

Noctuidae

Pyreferra sp.*

Tortricidae

Bibionidae

Bibio articulatus

Dolichopodidae

Condyllostylus patibulatus*

Muscidae*

Platystomatidae

Rivellia sp.*

Moths, Butterflies

Lycaenidae

Satyrium calanus*

Spiders

Araneidae

Araniella displicata

Grasshoppers, Crickets

Oecanthidae*

Beetles

Buprestidae

Agrilus sp.*

Cerambycidae

Coccinellidae

Harmonia axyridis*

Curculionidae

Cyrtopistomus castaneus*

Phyllobius oblongus

Polydrusus formosus

Lampyridae

Photinus sp.

Scarabaeidae

Popillia japonica*

Bees, Wasps

Andrenidae

Andrena sp.

Vespidae

Ancistrocerus sp.

Flies

Thank you for participating in **Caterpillars Count!** For a more in-depth exploration of the data check out our Maps & Graphs page. The raw data from your site, or any site, can be downloaded [here!](#)

We can't wait to see what you find next year!

Sycamore tussock caterpillar, *Halysidota harrisii*, at Walker Nature Center, VA.
