

EwA at the Fells, 2021 Summary

The **219** total surveys conducted at **EwA at the Fells** this year ranks **25th** out of the **52** sites that participated in 2021.

Top Participants of 2021

User	Surveys	Arthropods	Caterpillars	% Caterpillars
Y Liu-Constant	11	22	4	18.18
C O'NEILL	72	253	12	9.72
K Danziger	30	105	1	3.33
L DiRocco	91	276	5	3.30
K McGlathery	1	3	0	0.00
NA NA	8	10	0	0.00
O Bible	2	3	0	0.00
S Gardner	4	7	0	0.00

Caterpillar Phenology

As a major source of food for nestlings of migratory birds, we are especially interested in the timing of caterpillar availability. At **EwA at the Fells** in **2021**, caterpillar occurrence peaked at **30%** of surveys on **24 May**. Do you see other peaks as well? How does the pattern compare to the previous year?

Other Arthropod Phenology

While caterpillars tend to have pronounced seasonal peaks, other groups are more variable. What patterns do you see below for **2021**? You can explore the phenology of other groups on the [Caterpillars Count! website](#).

Arthropod Trends

Annual monitoring is critical for assessing the health of ecosystems and evaluating the impacts of environmental change that may be happening in your area. There have been worrying reports of insect declines around the world but there is much we don't know, so your efforts help to fill in pieces of the puzzle. Keep it up!

Above you can see how the proportion of surveys with caterpillars has varied over time at your site, with the trend for one of our flagship sites, **NC Botanical Garden**, for comparison. If you've surveyed for at least 3 years, then you will also see the average dashed trend line displayed.

Below are trends for some other common arthropod groups. Do the different groups go up and down in sync, or seem to vary independently?

You can explore trends for more arthropod groups, and compare trends at different sites, on your site's [Trends Page](#). See also our [November 2021 newsletter](#) for more on how to interpret these trends.

Site Arthropod Composition

Some arthropods are more commonly encountered than others. The graph below portrays the density (arthropods per survey) of all arthropods groups found at your site. See how what was found varies by year (if the site has been participating for multiple years), and how it compares to what has been found across all sites in the **Caterpillars Count!** network (*right bar*).

- What are the most common arthropod groups found at your site?
- Has that varied by year?
- Is anything noticeably different about **EwA at the Fells** compared to all other participating sites?
- If arthropod photos were submitted as part of your site's surveys, check the last section of this report for a summary of any finer taxonomic id's that have been made.

Arthropod Composition by Plant Species

For some arthropods like spiders, trees and leaves are merely habitat—a place where they live, hide, and hunt. For others like caterpillars, the leaves are not just habitat, but also food.

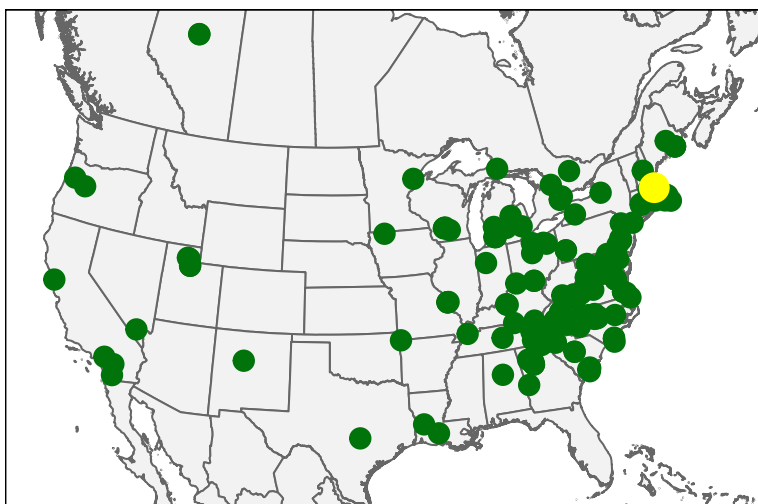

- Which plant species supports the most arthropods per survey?
- Which plant species supports the most **caterpillars**?
- Are any plant species dominated by just one or two types of arthropods?
- Or do they support a diversity of arthropod types?

This bottom panel shows, of the arthropods found on a given plant species, what proportion were from each taxonomic group. At most, only the top 25 plant species are shown.

Broader Patterns

Thanks to participants like yourself, **Caterpillars Count!** observers have now submitted a total of **163,022** arthropod observations—including **11,354 caterpillars**—from **152** different sites.

Across all surveys ever done at **EwA at the Fells**, caterpillars have been found **15.1%** of the time, which ranks **21st** across sites. The top 10 sites (with ≥ 20 surveys) are shown below.

Caterpillar occurrence and phenology vary as a function of climate, land cover, tree species, and other local factors, and **your data** are helping us understand this variation and what it might mean for birds. Thank you for participating in **Caterpillars Count!**

Expert Identifications

732 photo observations from **Caterpillars Count!** surveys have been submitted from your site. You can check them all out at the site's [iNaturalist page](#). Based on these photo observations, experts on **iNaturalist** have identified the following taxa. Taxonomic groups seen for the first time this year are marked with a *.

Caterpillars

Erebidae

Halysidota tessellaris

Geometridae

Noctuidae

Acronicta sp.

Feralia sp.

Amphipyra pyramidoides

Morrisonia latex*

Notodontidae

Nadata gibbosa

Psychidae

Psyche casta

Moths, Butterflies

Tortricidae

Olethreutes fasciatana*

Spiders

Agelenidae

Anyphaenidae

Araneidae

Araniella displicata

Dictynidae

Linyphiidae

Florinda sp.

Mimetidae

Mimetus sp.

Philodromidae

Philodromus sp.

Salticidae

Hentzia mitrata

Grasshoppers, Crickets

Oecanthidae

Oecanthus sp.*

Tettigoniidae

Meconema thalassinum

True Bugs

Miridae

Reduviidae

Zelus luridus

Tingidae*

Leafhoppers, Cicadas

Acanaloniidae

Acanalonia conica

Cicadellidae

Jikradia olitoria

Rugosana querci

Derbidae

Cedusa sp.*

Membracidae

Aphids, Scales

Aphididae

Bees, Wasps

Pergidae

Acordulecera sp.

Tenthredinidae

Caliroa sp.

Craterocercus sp.

Vespidae

Vespula vidua

Ants

Formicidae

Camponotus nearcticus

Camponotus pennsylvanicus

Crematogaster sp.

Dolichoderus sp.

Formica sp.

Temnothorax curvispinosus

Flies

Asilidae

Efferia aestuans

Bibionidae*

Chironomidae

Chyromyidae*

Lauxaniidae

Homoneura sp.

Tipulidae

Thank you for participating in **Caterpillars Count!** For a more in-depth exploration of the data check out our [Maps & Graphs page](#). The raw data from your site, or any site, can be downloaded [here!](#)

We can't wait to see what you find next year!
