

Eno River State Park, 2025 Summary

The **822** total surveys conducted at **Eno River State Park** this year ranks **7th** out of the **68** sites that participated in 2025.

Top Participants of 2025

User	Surveys	Arthropods	Caterpillars	% Caterpillars
I Goulden	233	700	84	15.45
G Layman	9	12	1	11.11
S Carter	207	447	27	10.63
B Acosta	182	523	35	10.44
A Hurlbert	179	326	23	10.06
I Nieri	12	55	0	0.00

Caterpillar Phenology

As a major source of food for nestlings of migratory birds, we are especially interested in the timing of caterpillar availability. At **Eno River State Park** in **2025**, caterpillar occurrence peaked at **22.5%** of surveys on **14 June**. Do you see other peaks as well? How does the pattern compare to the previous year?

Other Arthropod Phenology

While caterpillars tend to have pronounced seasonal peaks, other groups are more variable. What patterns do you see below for **2025**? You can explore the phenology of other groups on the ***Caterpillars Count!*** website.

Arthropod Trends

Annual monitoring is critical for assessing the health of ecosystems and evaluating the impacts of environmental change that may be happening in your area. There have been worrying reports of insect declines around the world but there is much we don't know, so your efforts help to fill in pieces of the puzzle. Keep it up!

Above you can see how the proportion of surveys with caterpillars has varied over time at your site, with the trend for one of our flagship sites, **NC Botanical Garden**, for comparison. If you've surveyed for at least 3 years, then you will also see the average dashed trend line displayed.

Below are trends for some other common arthropod groups. Do the different groups go up and down in sync, or seem to vary independently?

You can explore trends for more arthropod groups, and compare trends at different sites, on your site's **Trends Page**. See also our **November 2021 newsletter** for more on how to interpret these trends.

Site Arthropod Composition

Some arthropods are more commonly encountered than others. The graph below portrays the occurrence (proportion of surveys where a given group was found) for each arthropod group found at your site. See how what was found varies by year (if the site has been participating for multiple years), and how it compares to what has been found across all sites in the **Caterpillars Count!** network (*right bar*).

- What are the most common arthropod groups found at your site?
- Has that varied by year?
- Is anything noticeably different about **Eno River State Park** compared to all other participating sites?
- If arthropod photos were submitted as part of your site's surveys, check the last section of this report for a summary of any finer taxonomic id's that have been made.

Arthropod Composition by Plant Species

For some arthropods like spiders, trees and leaves are merely habitat—a place where they live, hide, and hunt. For others like caterpillars, the leaves are not just habitat, but also food.

- Which plant species supports the most arthropods per survey?
- Which plant species supports the most **caterpillars**?
- Are any plant species dominated by just one or two types of arthropods?
- Or do they support a diversity of arthropod types?

This bottom panel shows, of the arthropods found on a given plant species, what proportion were from each taxonomic group. At most, only the top 25 plant species are shown.

Broader Patterns

Thanks to participants like yourself, **Caterpillars Count!** observers have now submitted a total of **358,184** arthropod observations—including **23,494 caterpillars**—from **274** different sites.

Across all surveys ever done at **Eno River State Park**, caterpillars have been found **9.9%** of the time, which ranks **60th** across the **204** sites with ≥ 20 surveys. The top 10 sites are shown for comparison.

Caterpillar occurrence and phenology vary as a function of climate, land cover, tree species, and other local factors, and **your data** are helping us understand this variation and what it might mean for birds. Thank you for participating in **Caterpillars Count!**

Expert Identifications

Your site has submitted **1,740 Caterpillars Count!** photos which ranks **5th** out of the **191** sites with photos. You can check them all out at the site's **iNaturalist page**. Based on these photos, experts on **iNaturalist** have identified the following taxa, including at least **72** unique species. Taxa seen for the first time this year are marked with a *.

Caterpillars

Erebidae

Halysidota tessellaris*
Hyphantria cunea
Orgyia leucostigma

Geometridae*

Noctuidae

Colocasia sp.
Acronicta americana
Morrisonia confusa

Notodontidae

Misogada unicolor

Tortricidae

Ancylis platanana

Moths, Butterflies

Coleophoridae

Coleophora sp.

Crambidae

Crambus sp.
Petrophila canadensis*

Depressariidae

Antaeotricha sp.*

Geometridae

Dyspteris abortivaria*

Spiders

Anyphaenidae

Anyphaena sp.*
Wulfila sp.

Araneidae

Araneus sp.*
Larinioides sp.
Mangora placida
Metepeira labyrinthea
Neoscona crucifera*
Micrathena gracilis
Micrathena mitrata
Micrathena sagittata

Verrucosa arenata

Corinnidae

Trachelas sp.

Dictynidae*

Linyphiidae

Florinda coccinea*

Mimetidae

Mimetus sp.

Philodromidae

Philodromus sp.

Salticidae

Colonus sylvanus
Hentzia sp.
Maevia sp.
Tutelina sp.

Lyssomanes viridis*

Phidippus clarus

Tetragnathidae

Leucauge venusta
Tetragnatha sp.

Theridiidae*

Thomisidae

Tmarus sp.
Misumessus oblongus
Synema parvulum

Stenotrichelidae

Grasshoppers, Crickets

Gryllacrididae

Camptonotus carolinensis*

Oecanthidae

Oecanthus sp.*

Trigonidiidae

Phyllopalpus pulchellus*

True Bugs

Coreidae

Acanthocephala sp.*

Miridae

Hyaliodes harti

Pentatomidae

Chinavia hilaris

Reduviidae

Sinea sp.*

Zelus luridus*

Leafhoppers, Cicadas

Acanaloniidae

Acanalonia conica

Cercopidae

Prosapia bicincta*

Cicadellidae

Colladonus clitellarius*
Graphocephala versuta
Jikradia olitoria
Oncometopia orbona*
Oncopsis nigrinasi
Orientus ishidae*
Pediopsoides distinctus*

Cicadidae

Magicalcica tredecassini

Clastopteridae

Clastoptera obtusa
Clastoptera testacea*

Derbidae

Cedusa sp.

Flatidae

Flatormenis proxima
Metcalfa pruinosa
Ormenoides venusta

Membracidae

Platycotis vittata

Aphids, Scales

Aphididae

Drepanaphis sp.

Pemphigidae

Grylloprociphilus imbricator

Psyllidae
Psylla carpinicola

Beetles

Cantharidae
Rhagonycha sp.
Cerambycidae
Urgleptes signatus
Chrysomelidae
Neolema sp.
Cryptocephalus mutabilis
Coccinellidae
Harmonia axyridis
Psyllobora vigintimaculata*
Cupedidae
Tenomerga cinerea
Curculionidae
Cyrtepidomus castaneus
Lechriops oculatus*
Myosides seriehispidus
Odontopus calceatus
Pseudocneorhinus bifasciatus
Pseudoedophrys hilleri
Elateridae
Erotylidae
Melandryidae
Mordellidae
Falsomordellistena hebraica
Ptinidae
Trichodesma gibbosa*
Scarabaeidae
Macroductylus subspinosus
Popillia japonica*
Staphylinidae
Palaminus sp.
Tenebrionidae

Ants

Formicidae

Camponotus subbarbatus*
Formica subsericea*
Prenolepis imparis*

Flies

Asilidae
Taracticus octopunctatus
Chironomidae
Dolichopodidae
Condylostylus sp.*
Keroplastidae
Macrocera sp.*
Micropezidae*
Syrphidae
Ocyrtamus fuscipennis

Other observations

Blattodea
Parcoblatta*
Ephemeroptera
Heptageniidae*
Maccaffertium
Stenacron*
Isopoda
Armadillidium nasatum
Neuroptera
Chrysoperla*
Chrysoperla rufilabris*
Coniopterygidae*
Micromus*
Plecoptera
Perlidae
Polydesmida
Oxidus gracilis
Psocodea
Polypsocus corruptus*
Cerastipsocus venosus
Spirobolida

Narceus americanus*

Thank you for participating in **Caterpillars Count!** For a more in-depth exploration of the data check out our **Maps & Graphs page**. The raw data from your site, or any site, can be downloaded **here!**

We can't wait to see what you find next year!

Spicebush swallowtail caterpillar, *Papilio troilus*, observed by *tem1691* on August 22, 2025 at **Lake Murphysboro State Park, Overflow**, Illinois.
