

OFFLINE MODE SUBMISSION *Caterpillars Count!*

The app has an **Offline Mode** so that you can still use it to submit surveys even if your site does not have reliable cell service. For basic app instructions see the [Mobile App Manual](#).

BEFORE GOING OFFLINE

In order to successfully collect data in **Offline Mode**, there are two important things to do BEFORE heading to the field.

1. You must open the *Caterpillars Count!* app in advance somewhere that you have cell or wifi connectivity (e.g. at home, or in the office) BEFORE ARRIVING AT YOUR SITE. Simply tap the icon to open the app so that it is ready to use after you arrive.
2. (Optional) It's a good idea to make sure the site password actually works for this site. You can enter one of your site's 3-letter branch codes, and the password, and make sure it lets you continue to the next page. If so, then you should be all set.

IN THE FIELD

Once you arrive at your remote field site, put your device in Airplane mode. **We recommend that you keep your phone in Airplane mode for the duration of your branch surveys**, rather than going in and out of Airplane mode based on the patchy cell signal that might be present at some parts of your site.

For the first survey of the day, you will have to enter the Site Password. However, for each subsequent survey you should be able to check the box labeled "*Same password as previous observation*", and the password should autofill.

Caterpillars Count!

Step 1: Site Information

Branch survey code: ?
EJR

Site password: ?
.....

Same password as previous observation ☒

of offline surveys saved

SUBMIT OBSERVATIONS

Step 1: Site Information

Branch survey code: ?
EJR

In offline mode, once you hit *FINISH*, the survey will be stored locally on your device, and an icon will show up in the top banner indicating how many stored surveys there are. That number should increase each time you *FINISH* another offline survey.

SUBMITTING OFFLINE SURVEYS

These stored surveys will get submitted automatically once you:

1. are connected to a cell or wifi signal again, and
2. you re-open the *Caterpillars Count!* app page.

You will know your surveys have uploaded when the numbered icon at the top disappears. If it does not do so, simply refresh the page by pulling down from the top of the screen.
